

Tour Edge
Exotics XCG

TRADITIONAL SHAPES

While still maintaining a traditional driver shape, the new **Tour Edge Exotics XCG** driver has so much superior science packed into the club that it deserves a

long trial on the demo range. First, Tour Edge designers discovered a way to put its extraordinary titanium cupface on a driver without breaking the design rules of

the USGA. The answer came in the form of a magnesium crown that allowed the company to place useful discretionary weight in other places. The XCG is the

first club ever to have a magnesium crown and neck. With three very different metals in one club, Tour Edge amazingly uses a no-weld technology to put the driver together. The result is a high-MOI, high-ball-speed club.

PING, a company rich with
